EXPERIENCE

Software Development Engineer

Jul. 2026 – Present

Info Edge (Naukri.com) | Java, Spring Boot, Kafka, Elasticsearch, Redis, Docker, Kubernetes

Noida, India

- Built a client-specific taxonomy search feature using Java, Spring Boot, and Elasticsearch, allowing different clients to customize taxonomy labels and rankings while still retrieving relevant master data.
- Developed Kafka-based data pipelines to synchronize master and client-specific taxonomy data from SQL to Elasticsearch, supporting full, incremental, and on-demand indexing with update and deletion handling.
- Built an internal AI usage tracking platform for Claude, Codex, and Cursor, using a lightweight cross-platform client and OpenTelemetry pipelines to collect per-user and per-model usage into a centralized dashboard, enabling attribution across shared organizational accounts.
- Redesigned MIME-type detection in a file validation service using a persistent Magika ML daemon over Unix domain sockets with fallback validation, reducing median response time by 63% (269 ms to 98 ms).

Software Developer Intern

Jan. 2026 – Jun. 2026

Info Edge (Naukri.com) | Java, SQL, Redis, Docker, Jira, AWS

Noida, India

- Built an internal AI-assisted test-generation platform with 12 specialized agents for unit, integration, API-functional, and Playwright E2E tests, reducing test-authoring effort by 60–70% in internal evaluations.
- Enhanced the internal AI Test Case Generator with authentication, Jira validation, Redis caching to avoid redundant test generation, and tag recommendations; built a CI-integrated Playwright failure listener that used DOM snapshots, screenshots, and stack traces to detect and repair broken locators.

Backend Engineering Intern

Jun. 2025 – Oct. 2025

Coding Jr | Go, Fiber, MySQL, Redis, Docker, AWS

Remote

- Built and maintained Go/Fiber APIs across 10+ portals used by 50+ schools; optimized GORM queries and delivered dashboard endpoints.
- Developed an online assessment engine with per-user question randomization, timed availability, attempt limits, negative marking, and queued answer updates.

PROJECTS

ForgetAI | Go, Next.js, MongoDB, Redis, Pinecone, OpenAI, Google Cloud Run | [Link](#)

- Built the Go/Gin backend for a personal knowledge assistant that ingests PDFs, tweets, and notes and enables natural-language retrieval over saved content.
- Implemented embeddings-based retrieval with format-aware chunking and Pinecone, alongside JWT authentication, per-user rate limiting, and Redis result caching.
- Containerized and deployed the application on Google Cloud Run with independently deployable frontend and backend services.

GitHub MCP Server for Claude AI | TypeScript, Node.js, GitHub API | [Link](#)

- Published a TypeScript MCP server providing 10 GitHub API tools for repository, branch, file, and pull-request workflows using Octokit and Zod.

SKILLS

- **Languages:** Java, Go, Python, SQL, TypeScript
- **Backend:** Spring Boot, Spring Batch, Gin, Fiber, REST APIs
- **Data and Messaging:** Kafka, Elasticsearch, Redis, MySQL, MongoDB, Pinecone
- **Cloud and Infrastructure:** Docker, Kubernetes, AWS, GCP, Linux, Git
- **Testing:** JUnit, Playwright

EDUCATION

Dr. APJ Abdul Kalam Technical University

Ghaziabad

B.Tech in Information Technology, CGPA: 8.5

2022 – 2026

LEADERSHIP AND PUBLICATIONS

- **Leadership:** Led a 30-member programming club and organized technical events for 150+ participants.
- **Research:** Co-authored two Scopus-indexed papers, including publications at IEEE ICCSC 2026 and AECE 2025.
